Brainstorm & Idea Prioritization Template:

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorming

Brainstorming is a collaborative process where team members freely generate ideas to solve a problem without criticism. It encourages creativity, innovation, and teamwork. After collecting ideas, the team evaluates and prioritizes the best solutions based on feasibility, impact, and implementation effort. This process helps identify effective approaches for developing a reliable Book a Doctor web application that enables patients to search for doctors, book appointments, and manage healthcare services efficiently.

Problem Statement

Develop a **Book a Doctor** web application that enables patients to search for doctors, book appointments online, manage their appointment schedules, and receive booking confirmations. The system should help hospitals and clinics efficiently manage doctor availability, maintain patient appointment records, reduce waiting times, and improve healthcare services through a secure and user-friendly digital platform.

Step-2: Brainstorm, Idea Listing and Grouping

Frontend

- Design a responsive React.js user interface.
- Create patient registration and login forms.
- Develop doctor search and appointment booking pages.
- Build patient and doctor dashboards.

Backend

- Develop REST APIs using Express.js.
- Implement appointment booking and cancellation services.
- Manage doctor schedules and patient appointments.
- Handle user authentication and authorization.

Database

- Design MongoDB collections.
- Store patient and doctor details securely.
- Maintain appointment records.
- Store medical history and booking information.

Authentication

- Patient Login
- Doctor Login
- Admin Login
- Password Encryption
- Session Management

Reports

- Appointment Reports
- Doctor Schedule Reports
- Patient Booking Reports
- Daily and Monthly Appointment Summary

Deployment

- GitHub Repository
- Testing using Postman
- Application Deployment
- Bug Fixing

Step-3: Idea Prioritization

High Priority

- Patient Registration and Login
- Doctor Registration and Login
- Doctor Search
- Appointment Booking
- Appointment Management
- MongoDB Database Integration
- REST API Development

Medium Priority

- Appointment Cancellation

- Patient Dashboard
- Doctor Dashboard
- Appointment History
- Email/Notification Feature

Low Priority

- Theme Customization
- Online Payment Integration
- Video Consultation
- Report Export (PDF/Excel)
- Advanced Analytics
