

Project Design Phase
Proposed Solution Template

Date	14 July 2026
Team ID	
Project Name	Book a Doctor
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Patients face extreme difficulty, long phone queues, and lack of transparency when searching for and scheduling appointments with doctor specialties. Simultaneously, healthcare clinics suffer from administrative overload, double-bookings, high "no-show" rates, and fragmented, paper-based patient records.
2.	Idea / Solution description	A centralized "Book a Doctor" web and mobile platform that allows patients to search for verified doctors by specialty/location, view real-time availability calendars, book appointments instantly, and receive automated SMS/WhatsApp reminders. It features a secure portal for patients to view consultation histories and a dedicated dashboard for doctors to manage schedules and digital records.
3.	Novelty / Uniqueness	Unlike standard directories, our solution features a dynamic real-time scheduling engine that automatically syncs doctor availability instantly, integrates an automated queuing/waitlist system for sudden cancellations, and provides a secure, unified patient-doctor medical interaction log.
4.	Social Impact / Customer Satisfaction	Social Impact: Democratizes access to healthcare by reducing barriers to finding specialized care, especially for vulnerable or remote populations. Customer Satisfaction: Eliminates waiting room frustration, cuts down scheduling times from hours to seconds, and provides patients with peace of mind through direct, transparent communication.
5.	Business Model (Revenue Model)	* SaaS Subscription Fee: A monthly/yearly tier-based software subscription charged to clinics/hospitals for using the dashboard.

		* Convenience Booking Fee: A tiny, flat transactional fee charged to patients for premium, instant digital bookings. * Featured Listing Fee: An optional advertising fee for doctors who want to promote their clinics at the top of localized search results.
6.	Scalability of the Solution	Highly scalable through a cloud-hosted microservices architecture. It can easily expand from local private clinics to city-wide hospital networks, and accommodate regional scaling by simply integrating multi-language support, regional payment gateways, and localized telemedicine video-consultation modules.
